

Interior Design for the 154m² Quality Residence Showflat of "Jia San Hao Yuan" Four-Generation Home, Huizhou

Built upon the deep understanding of the fourth-generation housing, this project aims to reconstruct the emotional connection between humans and nature within an urban context.

A Living Environment Blending Eastern Ambiance with French Elegance

This project integrates the serene and refined ambiance of Eastern living spaces with the elegant and unhurried attitude of the French lifestyle, creating a living environment that embodies both ecological wisdom and humanistic care.

A "Breathing" Ecosystem

Balcony planting systems and natural ventilation design transform ecological elements from mere scenery into an integral part of the building, forming a "breathing" ecosystem. This promotes micro-climate regulation and human-nature interaction, injecting vitality into the home.

Stress Relief and Emotional Interaction

This project breaks away from the constraints of conventional, isolated spatial layouts. Through the flexible reorganization of space, it fosters stress relief and encourages emotional connection. The specially designed modular terrace extend the living space outward, offering a natural setting for social interaction.

Flexibly Evolving Interior Space

The interior space adopts a flexible “support and infill” system. With transformable furniture and an open-plan layout, the space can evolve with the family. Various age-friendly designs, such as accessible circulation paths, anti-slip and antibacterial surfaces, and multi-generational shared spaces, ensure safety, comfort, and autonomy for every member of the household.

Deep Fusion of Eco-friendly Technology and Natural Aesthetics

A whole-home smart environmental control system automatically optimizes lighting, ventilation, and temperature. Sustainable materials and processes, along with local artworks, seamlessly blend natural imagery and craftsmanship into daily life, achieving a deep fusion of eco-friendly technology and natural aesthetics.
